Description	Weight
Clarity and professional presentation of the report including use of tables, figures and overall formatting. The concise summary of the project's key elements should be covered in the abstract. Table of contents, ,List of Figures and List of Tables should be comprehensive, correctly numbered and match the structure of the report.	10%
Appropriate use of language, chapters and sections to set out the argument for the reader, with clear connections within and across different chapters.	
It includes a list of cited in-text items. It should be comprehensive, correctly formatted, and consistently follow an academic style, preferably Harvard. The quality and relevance of the sources will also be considered.	
It includes a list of general reading items. It should be comprehensive, correctly formatted, and consistently follow an academic style, preferably Harvard. The quality and relevance of the sources will also be considered.	
Appendices can be used to include any additional information that is relevant but is too long or too detailed to include in the main body of your report. It should include at least the followings: 1) link to video demo of the project, 2) link to Project's GitHub page, 3) work submitted as part of the IPD, etc.	
The introduction gives the reader a clear sense of the type of project, purpose and connection to practice. The aim and objectives should be clear and achievable and lead to successful completion of the FYP achieving difficult technical/ research tasks. The background chapter demonstrates a comprehensive understanding of the research topic through a well-structured literature review, an in-depth review of relevant methods and applications, and an analysis of tools. Critical and reflective evaluation of the existing work, methods and tools, highlighting gaps, opportunities and justifying the relevance to the project. It includes any legal, ethical, social, professional and security issues associated with the research, the software/application/data infrastructure built and/or the data collected/analysed. Consideration of Sustainability practices in the project. Critical review of the methodology used, clearly presenting associated techniques and tools. The methodological approach is appropriate for achieving the objectives and makes contribution to knowledge/practice.	40%

Conclusions and recommendations are drawn in reference to the inquiry aim(s) given in the introduction, results and literature. The conclusions include some reflective critique of the process as part of evaluation of findings, limitations and further recommendations. It includes reflections on the resulting application/models, further development of existing skills, acquisition of any new knowledge and skills, and any further work to improve findings and/or application	
Detailed presentation and justification of tools used for the development of model(s)/ algorithm(s)/ software/ application/ system.	50%
It includes model development using the selected methods and techniques. It may also include user testing and functional testing if applicable. Presentation and critical evaluation of solution produced highlighting technical and analytics competence, creativity and complexity. Demonstrate originality that makes a contribution to knowledge/practice. Detailed presentation of model development with elements of critical thinking. Key results should be clearly identified, presented and summarised. In-depth explanation of the main code written with clear indication of novel code, code that is adopted/adapted and the original sources. Code should be well executed. Different testing techniques are discussed. Suggestions for further development of the project are presented.	
Analysis and discussion of key results, and evaluation and comparison of models, with clear evidence of critical thinking.	
Viva voce examination is a compulsory part of the assignment. Missing it will result in an automatic fail (a mark of zero will be recorded).	0%

TOTAL NUMBER OF WORDS

Description

Clarity and professional presentation of the report including use of tables, figures and overall formatting.

The concise summary of the project's key elements should be covered in the abstract. Table of contents, ,List of Figures and List of Tables should be comprehensive, correctly numbered and match the structure of the report.

Appropriate use of language, chapters and sections to set out the argument for the reader, with clear connections within and across different chapters.

It includes a list of cited in-text items. It should be comprehensive, correctly formatted, and consistently follow an academic style, preferably Harvard. The quality and relevance of the sources will also be considered.

It includes a list of general reading items. It should be comprehensive, correctly formatted, and consistently follow an academic style, preferably Harvard. The quality and relevance of the sources will also be considered.

Appendices can be used to include any additional information that is relevant but is too long or too detailed to include in the main body of your report. It May include: 1) data from requirement gathering, 2) detailed steps of data collection, preprocessing and/or analysis, 3) extended key code, etc.

The introduction gives the reader a clear sense of the type of project, purpose and connection to practice. The aim and objectives should be clear and achievable and lead to successful completion of the FYP achieving difficult technical/ research tasks.

The background chapter demonstrates a comprehensive understanding of the research topic through a well-structured literature review, an in-depth review of relevant methods and applications, and an analysis of tools. Critical and reflective evaluation of the existing work, methods and tools, highlighting gaps, opportunities and justifying the relevance to the project.

It includes any legal, ethical, social, professional and security issues associated with the research, the software/application/data infrastructure built and/or the data collected/analysed. Consideration of Sustainability practices in the project.

Critical review of the methodology used, clearly presenting associated techniques and tools. The methodological approach is appropriate for achieving the objectives and makes contribution to knowledge/practice.

Conclusions and recommendations are drawn in reference to the inquiry aim(s) given in the introduction, results and literature. The conclusions include some reflective critique of the process as part of evaluation of findings, limitations and further recommendations. It includes reflections on the resulting application/models, further development of existing skills, acquisition of any new knowledge and skills, and any further work to improve findings and/or application.

Detailed presentation and justification of tools used for the development of model(s)/ algorithm(s)/ software/ application/ system.

It includes model development using the selected methods and techniques. It may also include user testing and functional testing if applicable.
Presentation and critical evaluation of solution produced highlighting technical and analytics competence, creativity and complexity. Demonstrate originality that makes a contribution to knowledge/practice.
Detailed presentation of model development with elements of critical thinking. Key results should be clearly identified, presented and summarised.
In-depth explanation of the main code written with clear indication of novel code, code that is adopted/adapted and the original sources. Code should be well executed. Different testing techniques are discussed.
Suggestions for further development of the project are presented.

Analysis and discussion of key results, and evaluation and comparison of models, with clear evidence of critical thinking.

fail (0-39)	pass (40-49)
Report is disorganised and lacks essential sections/components. Formatting is inconsistent or confusing.	Basic formatting present but inconsistent (e.g. font size, figure captions). Some key sections/components missing or poorly placed.
Poorly structured writing. Content lacks logical flow within and/ or between sections. Difficult to follow arguments or narrative.	Write-up is a limited narrative of what happened. Argument is difficult to follow. Some logical gaps.
no or very few in-text citations. Incorrect formatting.	Occasional in-text citations. Inconsistent or poor referencing style. Relevance of sources is questionable.
Bibliography missing or incomplete. Poor formatting.	Limited bibliography. Some issues with relevance or formatting.
Appendices missing, irrelevant or poorly linked to the main text.	Appendices present but not clearly referenced or explained in the report.
Poor context. No clear aims/ objectives. The reader can gain a limited or no sense of what the project is about.	Vague or overly broad project aims/ objectives, lacking clarity or relevance. The reader can get a clear sense of the type of project. Scope and formulation may not be congruent with the problem statement.
Lacks depth or relevance. Poor evaluation of sources.	Limited range of literature. Surface-level understanding. Some relevance but lacks structure and/ or synthesis.
Issues not addressed or poorly understood. No evidence of data governance awareness.	Some attempt to identify and/ or address issues, but lacks detail or practical implications.

Unclear or inappropriate methodology. Poor justification.	Basic description. Weak rationale. Methodology not fully aligned with aims.
Missing or irrelevant conclusions. No reflection on outcomes or process. No further development of existing skills. No new skills.	Weak conclusions. No link to findings or objectives. No suggestions for future work. Limited or no further development of existing skills. No new skills.
Tools used are not identified, unclear or inappropriate. No justification or rationale.	Tools are mentioned but chosen arbitrarily or without alignment to objectives.
Little or no progress towards the solution. Poor or no model development.	Basic model or prototype, with little explanation or testing.
No results presentation or interpretation. Poor visualisation/presentation (e.g. unclear table, wrong charts)	Basic results with minimal or incorrect analysis. Visuals poorly used.

Marking scheme - rubric	
2:2 fair (50-59)	2:1 good (60-69)
Most sections/components are included. Formatting mostly correct but with minor issues in consistency and layout.	Well-presented report with all expected sections/components. Clear formatting (e.g. Figures and tables appropriately placed and labelled). Minor issues.
General structure is evident but could be improved. The arguments developed may be implicit. Some unclear transitions within or between sections.	Generally well-structured and coherent writing. Transitions are mostly smooth.
Adequate in-text citations. Some errors in formatting or relevance. Some claims are unsupported.	Mostly relevant and accurate in-text citations. Consistent use of referencing style.
Acceptable bibliography. Mostly relevant but some lacks academic rigour. Formatting could be improved.	comprehensive and relevant bibliography. Mostly well formatted.
Appendices contain relevant materials, but presentation is unclear or incomplete.	Relevant and generally useful appendices, including key information or artefacts (e.g. Tables, code, additional results). Content is references appropriately.
Aims/ Objectives present but not clearly defined with limited connection to project outcomes. The reader can get a clear sense of the type of project.	Clear aims/ objectives that align with the project scope. Context and rationale are reasonable explained.
Adequate background research. Attempt to compare or evaluate sources, but critical depth is lacking.	Good understanding and integration of relevant literature. Some critical evaluation and comparison.
addresses some relevant issues but lacks depth or integration.	covers key issues with relevance to the project. Shows understanding of ethics, legality and sustainability.

Acceptable methodology. Some justification and structure.	Sound methodology with suitable justification. Aligned with aims.
Basic summary of findings. Limited reflection or recommendations. Development of some existing skills and/or gaining some new skills.	Conclusions are clear and aligned with objectives. Some reasonable reflection and recommendations. Further development of existing skills and gaining some new skills.
Tools are somewhat appropriate. Some justification, but superficial.	Tools are appropriate for the project. Justification considers strengths/limitations.
Model(s)/Prototype presented with basic explanation. Limited validation.	Solid solution that meets core objectives. Good model development with some validation.
Results are presented and interpreted, but with limited insight or accuracy.	Clear, accurate presentation and interpretation of results. Some critical evaluation.

1st - very good (70-79)	1st - exceptional (80+)
Well-formatted and presented report. Few to no issues.	Exceptionally clear, polished and professional report. All structural elements flawlessly integrated.
Clear, coherent and well-organised writing throughout the report. Arguments are well developed and logically sequenced.	Exceptionally clear writing. Fully congruent and cogent arguments. Seamless transitions and flow.- Complex ideas are clearly presented.
Referencing is accurate and consistently applied. Sources are well integrated into the text.	comprehensive and precise in-text citations. Sources are relevant and used critically to support points. Exemplary use of academic referencing.
Thorough and appropriate bibliography, properly formatted.	Extensive, relevant and expertly formatted bibliography.
Well-structured and relevant appendices, meaningfully supporting the report. Clear links to analysis.	Highly relevant and well-integrated appendices, adding strong value to the report (e.g. additional models, detailed logs).
Well-presented introduction with relevant background. Objectives are specific, measurable and well-articulated. Strong alignment with research/ practical relevance.	Excellent introduction. Aims and objectives are ambitious yet realistic, grounded in relevant theory and practice.
Well-researched and critically enagaing review. Applied and theoretical concepts are clearly linked to the project.	Insightful and original synthesis of the literature. Shows outstanding knowledge and understanding of the field.
Well-considered and thoughtfully integrated discussion of issues into project decisions (e.g. anonymisation, bias mitigation).	Deep and reflective analysis of all relevant issues, taking into consideration real-world impact, legal framework, and sustainability principles.

Appropriate, well-justified and critically reviewed methodology. Tailored to project objectives. Justification shows awareness of alternatives.	Innovative, rigorous and clearly justified methodology. Demonstrates creativity and domain expertise.
Strong, evidence-based conclusions. Insightful critique and useful recommendations. Further development of existing skills and significant gain of new technical/analytical skills.	Outstanding reflection on process and results. Forward-looking and impactful recommendations based on findings. Further development of existing skills and significant gain of new technical/analytical skills.
Excellent justification based on project requirements. Strong understanding of tools' capabilities.	Thorough comparison and justification of relevant tools. May integrate multiple tools innovatively.
Technically strong and well-justified solution. Comprehensive model development and validation.	Exceptional solution development. Model(s) creative, robust and thoroughly validated. Demonstrates deep technical and analytical proficiency.
In-depth and strong insight. Results are clearly discussed and well supported.	High-level critical analysis. Insightful comparisons with benchmark/literature. Use of advanced visualisation and metrics.
